[†] The table above contains materials chemistry information by CAS number for the product listed above. Steelcase does not own the formulation chemistry for any of the materials in its products. Steelcase (and our affiliates/agents) strives to collect chemistry information from suppliers down to 100 ppm per homogeneous material. Because this level of chemistry is not always available, it is not possible to say with certainty that products are completely free of any given chemical. Internal expertise is used to make judgements about the presence or absence of certain chemicals as intentionally added ingredients. Users should be aware that the information available may represent a typical product representation and may not reflect the exact product being specified.
