

Circular by Steelcase

As part of our commitment to designing for circularity on our path to achieving net-zero carbon emissions by 2050, we offer our customers ways to reuse, repair, remake and recycle our products. These end-of-use services empower our customers to meet their sustainability goals, reduce our own carbon footprint and keep furniture out of landfills.

Circular by Steelcase includes programs and services for:

Reuse

We design our furniture to last so it can be reused when it's time for a change.

Repair

We design products to be easily fixed, provide repair services, and offer an industry-leading warranty.

Remake

We remake furniture to meet original specifications so it can be enjoyed longer.

Recycle

We promote recycling by designing for disassembly and helping divert materials to their proper recycling stream.

How we Do This

Circular by Steelcase: Remade

Circular by Steelcase: Remade in the Americas and EMEA supports customers by remaking their furniture to original specifications. With each purchase through Remade, documents can be provided with the amount of furniture diverted for landfill and the equivalent carbon emissions avoided.

Decommissioning

Steelcase has a range of organizations we work with in order to get you the right fit for your decommissioning needs. They vary based on scope of work, costs involved, and global region.

1. **Needs Assessment:** Identifying sustainability goals and project scope.
2. **On-Site Evaluation:** Assessing the condition of the furniture.
3. **Decommissioning Plan:** Developing and bidding out a local labor plan.
4. **Execution and Reporting:** Completing the project and providing reports on landfill diversion and carbon savings.

Warranty

Our warranty extends the useful life of our products. Under the Steelcase Limited Lifetime Warranty, we will repair or replace covered parts free of charge if they fail under normal use, guaranteeing that your investment lasts as long as intended.
